Voice Alert® System-6 Makes Custom Installations Easy

Encinitas, Calif. – December 17, 2003 – Custom installations and system integration just got easier thanks to new upgrades to the full-featured Voice Alert® System-6 wireless annunciator system. Contact closures and audio output now come standard with the newest Voice Alert System-6.

Now Installers can choose to use Voice Alert's infrared (PIR) sensing capabilities or a hardwire contact built into the sensor/transmitter to determine a potential security breach in a home or business application. When the sensor/transmitter is triggered either by movement detected via infrared or a hard contact, the unit sends a wireless signal to the receiver causing a user-recorded message to alert the user.

Along with the upgrades to the sensor's functionality, the Voice Alert receiver/speaker also has added audio capabilities. Now installers can provide message amplification by connecting the wireless Voice Alert receiver to an existing intercom, speaker or public address system using the built-in audio output. Then the user can hear alert messages either in a single room or throughout an entire location.

-more-

“Feedback from security installers indicated that they wanted to integrate Voice Alert into more of their security installations,” explained Phil Kessler, Cross Point Industries, Inc., chief executive officer. “We heard their suggestions and responded with more built-in options. Now installers don’t need to use additional products to get the results they want, because the Voice Alert components include the features that satisfy those needs.”

Voice Alert System-6 is a patented, wireless annunciator system that allows specific, voice-customized alert messages to be recorded for each monitored zone. It is the most flexible and feature-rich wireless system on the market. Security dealers are discovering that it’s an affordable, yet valuable, addition to both residential and commercial security applications, especially in those hard-to-wire situations.

System-6 combines all-weather, wireless sensor/transmitter passive infrared (PIR) technology with an indoor receiver/speaker (RS). The system has a range of up to 1000 feet (300 feet through walls) and zone messages can be altered whenever needed. System-6 offers four “C” relays, enabling the triggering of other devices or the ability to integrate into a larger security or home automation system. Retail price for Voice Alert System-6 (RS and one PIR) starts at \$149.95. Additional sensors retail for \$69.95.
